Portfolio: shihab-portfolio-sqa-frontend.vercel.app

SUMMARY

Computer Science and Engineering graduate (Port City International University, CGPA 3.88/4.00, October 2026) focused on software quality assurance. I design test cases, test APIs with Postman and Newman, automate user journeys with Playwright, and write bug reports developers can reproduce. Testing my own Django application, I found and fixed 8 defects, including 3 security issues, and backed the fixes with 71 automated tests. Seeking an SQA internship or junior QA engineer role.

SKILLS

Testing	Test case design, manual functional testing, bug reporting, regression testing, access-control testing
API testing	Postman (collections, environments, chained variables, assertions), Newman CLI with HTML reports
UI automation	Playwright Test (JavaScript), Page Object Model, Allure and Playwright HTML reports
Database	SQL, MySQL (relational schema design, constraints)
Development	Python, Django, Django test framework, C++, JavaScript, Git and GitHub, Docker (basic)
Learning	SDLC/STLC and test planning, CI test runs with GitHub Actions

QA PROJECTS

DiagnoCare 2.0 — QA case study of a Django booking application 2026

Manual testing · Security testing · Django test framework · Python github.com/shihab-hossain1/DiagnoCare_2.0

- Wrote 57 test cases across 7 areas (authentication, sign-up, booking, privacy and access control, centre workflow, reports, UI), each with steps, expected result and priority (32 × P1, 18 × P2, 7 × P3).
- Found and fixed 8 defects, 3 of them security issues: patients could see other patients' reports, any logged-in user could open any booking by changing the URL ID, and report PDFs were reachable by public URL.
- Covered the fixes with 71 automated tests (all passing); rewrote an assertion that passed for the wrong reason and confirmed the new tests fail without the fix.

UI & API Test Automation — SQA course assignment (Ostad) 2026

Playwright · Postman · Newman · Allure github.com/shihab-hossain1/SQA-shihab-assignment

- Automated 3 end-to-end scenarios on the SauceDemo store with Playwright: locked-out user error, 3-item checkout with subtotal, tax and total checks, and Z→A sorting with a computed total.
- Built a Postman collection of 9 requests with 19 assertions against the reqres.in API, including negative cases (400, 404), and ran it from the CLI with Newman. Recorded run: 3/3 UI tests and 19/19 assertions passed.
- Refactored the UI tests into a Page Object Model version (github.com/shihab-hossain1/sqa-automation-assessment).

Patient Record Management System — relational database 2025

MySQL · SQL · ER design github.com/shihab-hossain1/Database_Project

- Designed a 12-table schema for hospitals, doctors, patients, diagnoses and operations; primary keys, 13 foreign-key constraints and NOT NULL rules reject invalid or orphaned records.

Other projects: Bangladesh House Price Predictor (Python, machine learning, 2026) · Solar Tracking System (Arduino Uno, LDR sensors, C++, 2024)

EDUCATION

B.Sc. in Computer Science and Engineering — Port City International University 2022 – Oct 2026

CGPA 3.88/4.00. Relevant coursework: Software Engineering, Database Management Systems, Computer Networks, Web Technology, Compiler, Pattern Recognition.

HSC — Hazera Taju Degree College, Chattogram · GPA 5.00/5.00 2021

SSC — Nasirabad Govt. High School, Chattogram · GPA 5.00/5.00 2019

TRAINING & ACTIVITIES

- Software Quality Assurance course — Ostad (2026) · Programming course — Phitron (2025)
- Member, PCIU Computer Club (2023 – present) · CSE Club coding contest and workshop (2026) · Peer tutor for school and college students (2019 – present)
- Languages: Bangla (native), English, Hindi
